- Successful engagements with major clients in a variety of sectors
- Worked extensively with business stakeholders from director level down to design and implement strategic vision with enterprise systems
- Collaborated with technical stakeholders to successfully launch enterprise systems within complex IT ecosystems
- Provided intensive mentoring and helped establish client practices
- 12 years experience as a Consultant
- A record of projects built to budget and within deadlines
- Excellent Interpersonal Skills
- Drive and Enthusiasm

Experience

Concentra Analytics

DevOps Engineer

November 2019 - Present (6 years 10 months)

London, United Kingdom

Self-employed

8 years 5 months

DevOps Engineer

November 2019 - Present (6 years 10 months)

London, United Kingdom

DevOps Engineer

April 2018 - Present (8 years 5 months)

London, United Kingdom

DevOps Manager

April 2018 - July 2019 (1 year 4 months)

Created AWS infrastructure – Cognito, RDS, Cloudformation using terraform. Set up Jenkins CI/CD Pipelines using Kubernetes and docker images for iOS and Android mobile apps. Services deployed to Kubernetes clusters incorporating unit, integration testing, and integrated code quality and security checks using SauceLabs, Sonarqube and Veracode. Set up monitoring and alerting for live production services after successful launch using ELK stack and Grafana Prometheus. Diagnosed and fixed issues for live systems.

Orgvue

DevOps Consultant

November 2019 - Present (6 years 10 months)

Cloud Architecture: Designed and implemented a scalable AWS multi-account topology utilizing a shared networking account to enhance security and isolation. Automation & CI/CD: Engineered end-to-end CI/CD processes for development teams, significantly streamlining the software development lifecycle (SDLC). Container Orchestration: Architected and deployed production-grade Kubernetes clusters using Amazon EKS, enabling high-availability application hosting. Infrastructure as Code (IaC): Leveraged Terraform to generate complete, repeatable infrastructure stacks, ensuring consistent environment provisioning. Security & Reliability: Created Docker build and release processes specifically for remediating security vulnerabilities and led incident response efforts to diagnose and resolve critical outages.

Indigo Lighthouse

DevOps Consultant

July 2019 - October 2019 (4 months)

Implemented complete secure cloud Infrastructure from scratch using IAC Terraform and Jenkins X Pipelines with VPCs, cloud databases, self-renewing SSL certificates, VPC Peering, Domain names, Load Balancing and encryption. Installed Kubernetes clusters with Jenkins X. Created CI/CD Pipelines for NodeJS Multi-Tenant Web Portal.

Vidyo Inc

DevOps Engineer

November 2017 - February 2018 (4 months)

Worked on Jenkins Pipelines to automate provision and deployment of images to Google Cloud Platform. Built Jenkins Pipelines to package and provision AWS AMI images and deploy to AWS. Deployed High Availability Chef cluster to Google Cloud. Deployed technical artefacts independently using automated

process during ongoing release process. Diagnosed and fixed defects, change requests and issues.

Yorkshire Building Society Group

1 year 5 months

JBoss DevOps Engineer Contractor

January 2016 - May 2017 (1 year 5 months)

Bradford, United Kingdom

Implemented automated build and deploy process for complex business rules software systems

Automated build and deploy of entire solution using Ansible and Vagrant

Created lifecycle management system integrating Blaze Advisor with Perforce and Jenkins

Implemented automated testing using Apache JMeter and Jenkins

Produced detailed documents, presentations for Business and Technical client audiences

Deployed technical artefacts independently using automated process during ongoing release process

Diagnosed and fixed defects, change requests and issues in a timely manner.

DevOps Engineer

January 2016 - May 2017 (1 year 5 months)

Implemented CI/CD Pipeline for complex business rules software systems using Ansible and Vagrant. Implemented automated testing using Apache JMeter and Jenkins. Deployed technical artefacts independently using automated process during ongoing release process.

FICO®

8 years 8 months

Java EE Engineer

March 2013 - October 2015 (2 years 8 months)

Birmingham, United Kingdom

Implemented product changes, undertaking detailed design, programming, unit testing and deployment, as required by the SDLC process.

Investigated and resolved reported software defects across supported platforms.

Worked in conjunction with product management to understand business requirements and converted into effective software designs that will enhance the current product offering.

Produced component specifications and prototypes

Provided realistic and achievable project estimates for the creation and development of solutions. This information formed part of a larger release delivery plan.

Developed and tested software components of varying size and complexity. Designed and executed unit, link and integration test plans and documented test results. Created test data and environments as necessary to support the required level of testing.

Liaised with the Quality Assurance Team and assisted with integration testing, system testing, acceptance testing and implementation.

Produced relevant system documentation.

Lead Technical Consultant

March 2007 - March 2013 (6 years 1 month)

Lead Technical Blaze Consultant

Providing business and technical consultancy on major projects to international clients

Designed and authored business rules following analysis of business users' requirements for major European and international clients including Norwich Union and T-Mobile.

Provided technical consultancy to major business clients in mapping strategic vision.

Worked extensively with technical stakeholders in the integration of software with existing systems.

Successfully implemented major projects for blue chip clients.

Provided mentoring and consultancy and helped establish a thriving factory.

Fair Isaac International

Technical Consultant

March 2007 - October 2015 (8 years 8 months)

Providing business and technical consultancy on major projects to international clients. Provided pre-sales technical input for major contracts. Gathered requirements from Business and Technical stakeholders. Analysed Business requirements and working extensively with business to author business rules specifications for major clients including JD Group, Norwich Union and T-Mobile. Provided technical consultancy to major business clients in mapping strategic vision. Worked extensively with technical stakeholders in the integration of software with existing and new systems. Provided mentoring and consultancy and helped establish a thriving Blaze factory with local British and Indian staff. Designed and implemented technical architecture and detailed design.

Norwich Union Healthcare
Consultant
2008 - 2009 (1 year)
